Ask Delbert...

What are the different types of door edge construction HMX can produce?

Great question Delbert! We can make a mechanically locked edge seam and a continuously welded edge seam.

The mechanically locked edge will have a visible seam on the edge of the door. This economical door has a track record of proven performance and is called the LS Series Door.

The SW Series Door is our premium custom door and features a continuously welded edge seam with no visible seams on the edge of the door.
